The solution

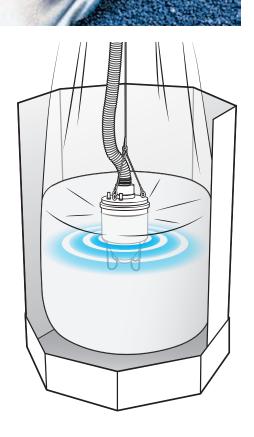

OKTOMAT® Emptying stations

the end of the discharging process. Often an operator has to guide the suction pipe by hand for a longer period of time in order to discharge a bulk bag.

The OKTOMAT® uses a vibrating suction head instead of the suction pipe and the automatic bag tightening mechanism pulls the foil inlet or Big Bag upwards. The suction head floats and vibrates in the material and breaks up lumps. The loosened material flows towards the middle and is continuously sucked.

Vibrating suction heads

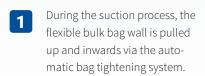

Functional principle

Automatic bag tightening via pneumatic cylinder

Automatic suction head follow-up with sinking filling level

Video at www.helios-systems.com

As a result, the bag tightens and the bulk material in the border area flows to the central suction point.

At the end of the discharging process, the almost empty bulk bag is automatically lifted up from the bottom, enabling a complete material discharging.

System components

OKTOMAT® SYSTEM

Base frames

Controls

Vibrating suction heads

Foil / Big Bag tighteners

The two OKTOMAT® series (SOS and ECO) use components from the OKTOMAT® system in different combinations according to the modular principle. This allows the optimum emptying station to be configured for almost any application.

OKTOMAT® SYSTEM

For all bulk bags with foil inlet or loops

The OKTOMAT® handles easily and effectively the discharging of all common types of Big Bags, octabins, folding boxes, lattice boxes, bulk bags with foil inlet, etc.

OKTOMAT® SYSTEM

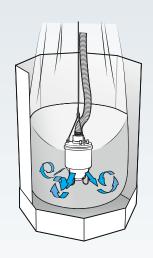

Bulk material in all variations

OKTOMAT® discharging stations are already suitable for most applications in their basic configuration. However, there are special materials whose characteristic properties must be taken into account when discharging and conveying.

Oscillating suction head and bulk bag tightener

Fluidization

Material-related solutions

For every requirement there are appropriate equipments for the configuration of the optimal discharge station.

Oscillating suction head

Prevents the suction head from going down. Optimum material flow.

Oscillating bulk bag tightener

Brings bridged material and remaining edge areas to collapse.

Special suction head

Different distribution of vibration in the granules, approved materials for the bulk solids, ATEX-compliant, etc.

Fluidization

The material is fluidized additionally, loosening is achieved by compressed air nozzles.

Typical bulk solids that can be discharged easily with OKTOMAT®

activated carbon powder

OKTOMAT® SOS Series

The all-rounder among the OKTOMAT® discharge stations

For all free-flowing, up to "difficult" materials

The OKTOMAT® SOS series is able to empty also problematic materials:

- regrind
- free-flowing powders
- bridge-forming granules such as TPE / Soft PVC
- bridge building agglomerates or similar
- food / salts etc.

Suction head oscillating system

The suction head enters vibrating into the material, is pulled up again in a time-controlled manner (the resulting sinkhole in the material fills up), is then lowered back onto the surface and the procedure starts again. The oscillation, stroke, lifting force and sequence of short or long strokes are individually adjustable.

as standard

Foil / Big Bag tightener Oscillating system

In case of very bridging materials, a non-slip wall may occur during the suction process. By repeated lowering and lifting of the foil / Big Bag tightener during suction, the material wall will be loosened, thus enabling the material to flow towards the suction point.

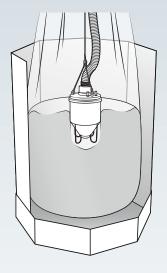

as standard

Maximum functionality

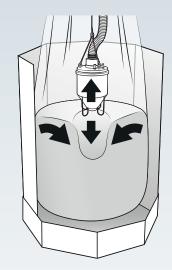

The OKTOMAT® SOS series is already equipped with the most important functions as standard.

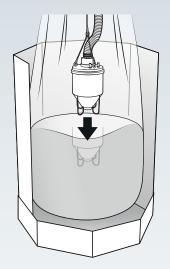

Oscillating system for suction head

During suction, a cavity may result in the suction zone underneath the suction head.

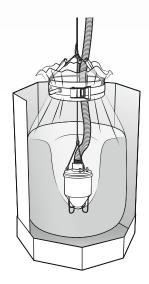

The suction head oscillation system raises the suction head. The resulting sinkhole fills up again.

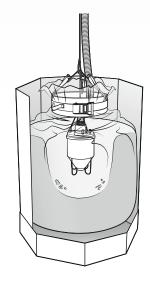

The system lowers the suction head back to the surface and makes it sink down timecontrolled.

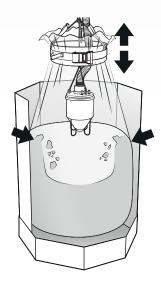

Oscillating system for foil / Big Bag tightener

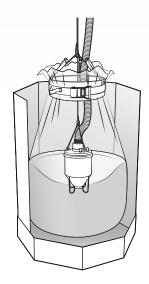

The border areas do not slip. A deep sinkhole is formed.

The oscillation system lowers the foil / Big Bag tightener towards the bulk material surface and the material under pressure in border area will be released.

The suction head is raised and the oscillating system pulls the foil wall upwards. The constricting container wall presses the material walls into the middle and causes them to collapse.

The suction head is lowered again and can suck away more material.

 - Empty signal via LED light and potential-free contact
 - Automatic changeover to the next OKTOMAT® (control part)

Delivered pre-assembled in transport box.

MATERIALS

Level of difficulty

free-flowing	Materials
poorly flowable	Materials
bridge-forming	Materials

OKTOMAT® SOS is ideally suited for the majority of applications. It handles the emptying of free-flowing to bridge-forming materials. For even more difficult tasks, the discharge station can be extended with options.

Materials	standard	optional
free-flowing	•	
poorly flowable	•	
bridge-forming	•	
difficult	_	•

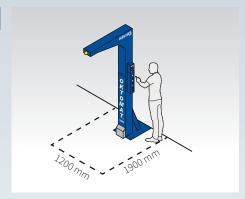

Placement

Footprint

Due to its pedestal form, the OKTOMAT® SOS is particularly space-saving in its width. An area of approx. 1200 mm x 1900 mm is recommended.

Operation

Containers can be transported on the front, left and right to the OKTOMAT®. The control unit can be easily operated from the side. A remote control is available as an option.

Installation height

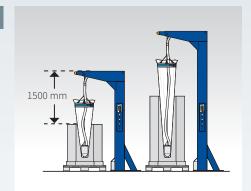

Installation height

The OKTOMAT® SOS is 8-fold height-adjustable. The installation height can be selected from 2600 mm - 3650 mm.

Container height

In order to achieve complete emptying, there must be a minimum distance of 1500 mm between the top edge of the container and the top edge of the discharge station.

An increase of 300 mm can be achieved subsequently by means of a base element.

Special versions

- OKTOMAT® SOS INOX
- OKTOMAT® SOS INOX ATEX
- OKTOMAT® SOS partial food version

OPTIONS

- Double station, automatic switching to next OKTOMAT® (pneumatic ball valves)
- Special suction heads SM / XL / S-80 Clean / XL-80 Clean available with conveying line 38 / 45 / 50 / 60 / 65 / 80 mm
- AK-version of suction head S-38, S-50 and SM
- Additional weight for suction head S-38/45/50
- Pneumatic vibrator for suction head
- Fluidization by compressed air via nozzles (suction head SM and XL only)
- Protection cover for containers + foil / Big Bag tightener
- Special size foil / Big Bag tightener Ø 260 / 400 / 500 mm
- Remote control with 5 m cable
- Movable frame on castors, powder-coated
- Movable frame on castors, stainless steel 1.4301 (AISI 304)
- Base element to increase height by 300 mm
- Partial food version for suction head and conveying line
- OKTOBAG® control with intuitive operator guidance and display of all operating states via graphic display

ATEX version

ATEX Zone 22

optionally available in ATEX version

- partial ATEX zone: suction head + conveying line + bulk bag tightener
- complete ATEX version for pedestal, control, suction head, conveying line and bulk bag tightener

suitable for series OKTOMAT® ECO

OKTOMAT[®] ECO Classic

OKTOBAG® control

The OKTOBAG® control is an extremely comprehensive discharge control and includes

- Graphic display with intuitive operator guidance
- Display of all operating states
- 5 function keys
- Buttons for automatic operation
- Button for conveyor unit ON/OFF

The entire program sequence can be individually programmed and individual functions can be disabled or enabled.

suitable for series

OKTOMAT® SOS

OKTOMAT[®] SOS Classic

Double station

As soon as a signal is received from the ECO / SOS / OKTOBAG® control, the conveying is switched on to the next full container via pneumatic ball valves.

■ Ideal for unmanned shifts

suitable for all OKTOMAT® types

Remote control

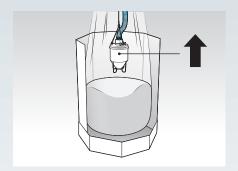

Lifting and lowering of suction head and foil / Big Bag tightener, automatic operation

■ 5 m cable

suitable for series OKTOMAT° SOS

OKTOMAT[®] SOS Classic

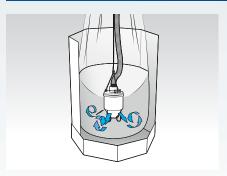

Conveying line emptying

In order to be able to empty the pipeline after each conveying process (e.g. in the case of long rising pipes), the suction head is raised above the bulk material level in the container when a signal is received from a conveyor control system and the pipeline is emptied.

> OKTOMAT° SOS OKTOMAT[®] SOS Classic

Fluidization

For loosening up dense bulk material, compressed air can be injected to fluidize the material to be sucked off.

available for suction head SM and XL only

separate control with two independent pneumatic circuits

suitable for series OKTOMAT° SOS OKTOMAT® SOS Classic

Protection cover

Cover for containers + foil / Big Bag tightener PVC, transparent with zipper Ø 1200 mm

Ø 1600 mm

suitable for all OKTOMAT® types

Additional weight

The additional weight increases the contact weight of the suction head on the bulk material and thus helps to enter into the bulk material.

- available for suction head S38 / S45 / S50 only
- + 4 kg

suitable for all OKTOMAT® types

Movable frame on castors

Movable frame on 4 castors incl. fixing bolts. Suitable for continuous use. Height: 155 mm (175 mm when fixed)

Width 1500 mm Depth 1400 mm

suitable for series OKTOMAT° SOS

Width 1500 mm Depth 1470 mm

suitable for series OKTOMAT° ECO Classic OKTOMAT[®] SOS Classic

OKTOMAT®

Pipe elbows

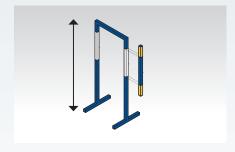

DN38, DN45 and DN50 (outer diameter)

- Standard pipe elbow (stainless steel 1.4301 (AISI 304))
- Stainless steel pipe elbow (hardened) wear-resistant
- Glass pipe elbow highly wear-resistant

suitable for all OKTOMAT® types

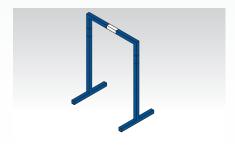

Special height

Extension 600 mm for maximum installation height of 4270 mm

suitable for series OKTOMAT° ECO Classic OKTOMAT® SOS Classic

Special width

Extension 300 mm for maximum portal width of 1820 mm for extra wide containers, max. width of container 1500 mm

suitable for series

OKTOMAT® ECO Classic OKTOMAT® SOS Classic

Special height

- A: Special height: 3500 3900 mm (4 x 100 mm steps)
- B: Special height: 2500 3000 mm (4 x 125 mm steps).

special version OKTOMAT® ECO

Height increasing base element

Base element to increase height by 300 mm. Mounting on OKTOMAT® foot section.

■ Height: 300 mm

■ Weight: 64 kg

suitable for series OKTOMAT® SOS

OKTOMAT® ECO

OKTOMAT® SYSTEM

Robust and durable

Thousands of OKTOMAT® systems are in use worldwide. Most of them work in 3-shift operation under the hardest conditions, e.g. in the plastics and chemical industries.

Low maintenance

OKTOMAT® discharging stations are designed for low maintenance and service-friendly. Any necessary spare parts can be changed with just a few steps.

Short payback period

OKTOMAT® discharging stations usually amortize after a few months. The exact amortisation period depends on the savings in terms of man-hours in the respective application case and the costs incurred so far due to production disruptions.

After Sales Service

We do not leave you alone with the HELIOS components, but accompany you through the entire process from the selection up to starting up and training of your employees. That is what we understand by partnership. Our staff will be pleased to advise you on the possible applications of our products and to inform you about our latest technical developments - also for possible retrofits.

- consulting
- starting up
- training
- upgrade
- maintenance/checking up
- spare parts supply within 24h

History of a success story

OKTOMAT® system discharging station wins out worldwide

HELIOS was granted an EP and a US patent for a suction device based on a patent application in 1995, in which a floating suction head is used for discharging bulk bags from above instead of the usual suction pipe. The foil bag is automatically pulled upwards via a tensioning device in order to achieve a complete discharging.

Following this fundamental idea, further procedural and additional features were developed gradually, such as

- Raising the remaining bulk material off the floor
- Clamping of the foil bag by means of a tension belt
- Oscillation of the suction head while discharging
- Fluidization of the bulk material by compressed air via nozzles at the suction head
- Clamping and relieving the bulk bag wall while discharging

which were also **protected by patent**, the "**OKTOMAT®**" system.

Depending on the task, various frame types have proven to be particularly advantageous in practice.

Since its launch at FAKUMA in 1996, more than 5000 systems have been installed worldwide.

OKTOMAT® in practice

OKTOMAT®

- robust and durable
- unmanned operation
- proven in thousands
- easy to operate
- min. operating costs
- suitable for all materials
- short payback period

blow molding extrusion compression molding injection molding

- paper / foil
- PVC processing
- recycling
- cable
- optics
- lighting
- WPC

- logistics
- paper finishing
- chemistry / raw materials
- medical technology
- food
- raw material handling
- technical parts

- automotive
- plug connectors
- packaging
- foil production
